

DIAGRAMS

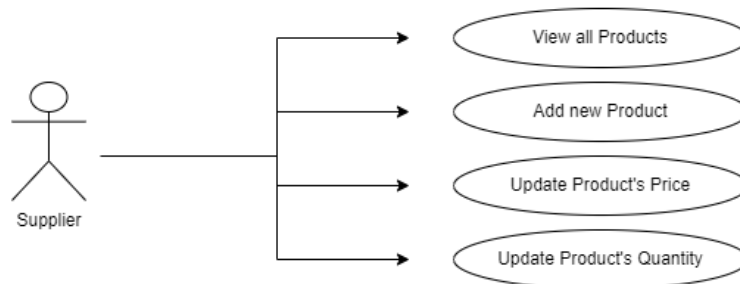

➤ Use Case Diagrams Update

After discussing again, we decided to make some other changes to some use case diagrams, exactly to Administrator and Supplier. The Updated versions are as shown below:

1. Administrator

2. Supplier

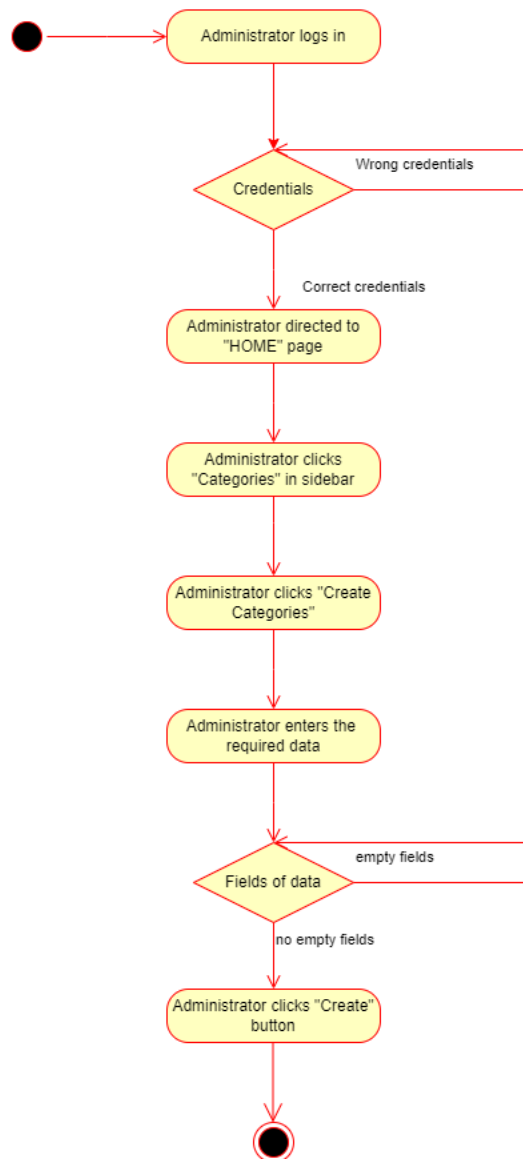

➤ Activity Diagrams

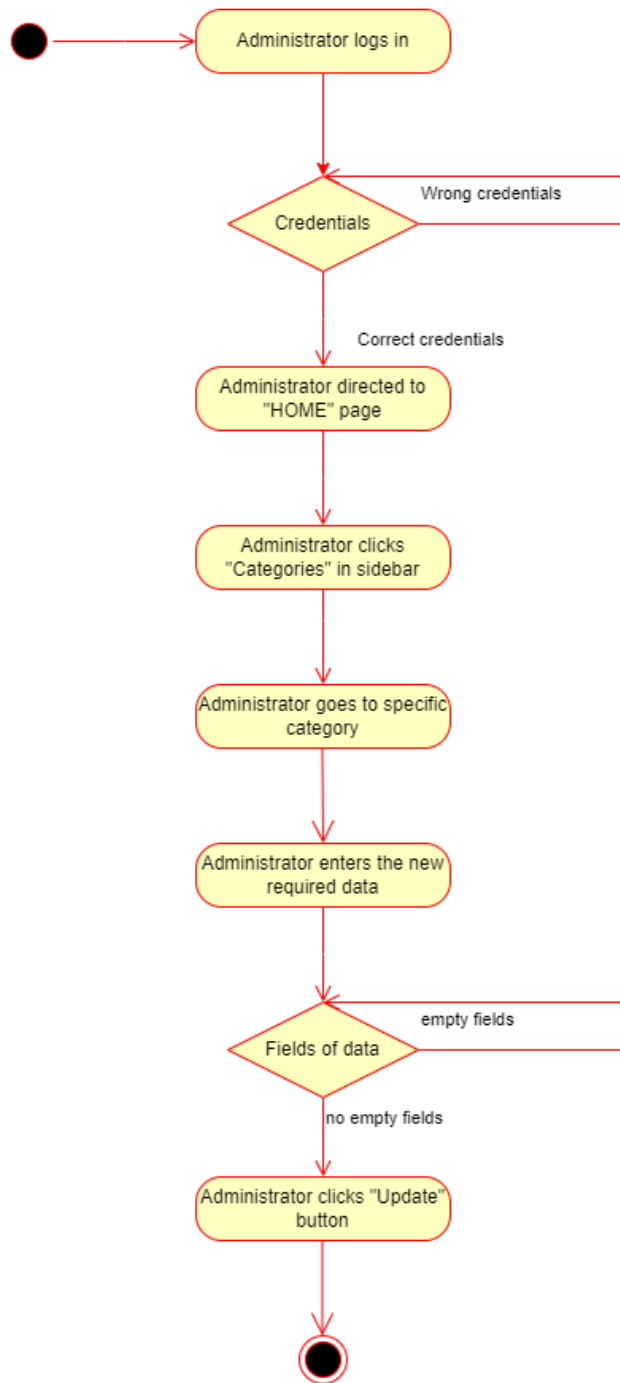

Activity diagrams consist of nodes, which represent activities or actions, and edges, which connect the nodes to show the flow of control between them. The nodes can be labeled with a description of the activity or action that takes place, and the edges can be labeled with conditions or constraints that determine the sequence of events.

Here are some of the diagrams I worked during this week:

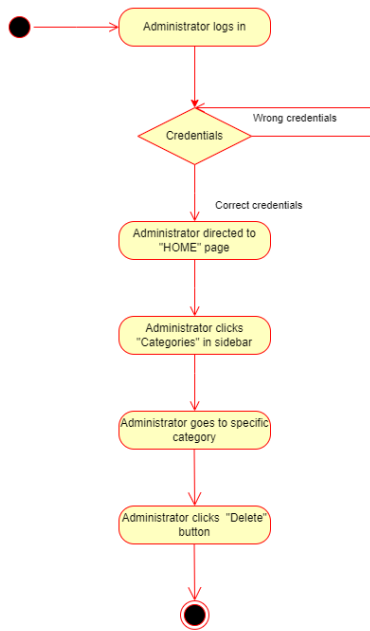

1. Create Category

2. Update Category

3. Delete Category

4. Create Product
